

BeoCom 2

BeoCom 2

BeoCom 2 is instantly recognizable as an original Bang & Olufsen solution that radically challenges traditional telephone design.

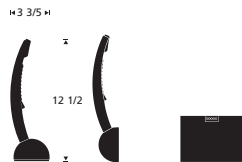

It's a cordless phone system that can contain up to eight individual BeoCom 2 or BeoCom 1 handsets from a single phone jack. Not to mention other numerous functions you'll also find convenient, such as Caller ID, Redial functions and an electronic phonebook with room for up to 200 entries.

For access to all functions, just use the thumb-track point inserted in the keypad. You can also use BeoCom 2's keypad to control the volume of Bang & Olufsen TVs and music systems. Available in a variety of colors and with its own unique ring tone, it is a telephone that people continue to talk about.

Visit www.bang-olufsen.com to learn more about BeoCom 2.
