

**GE APPLIANCES**

**ZONELINE®  
Dry Air 25**

**REMOVES UP TO 35% MORE HUMIDITY**

## Why Dehumidification?

Did you know there is more to comfort than temperature alone? Humidity levels determine comfort as much as temperature. Higher humidity causes lower temperature settings, making energy costs increase.

Unique design with NASA-based technology, Zoneline dry air models remove up to 35% more moisture from the air than standard models, making them perfect for high humidity climates.

### **THE IMPORTANCE OF DEHUMIDIFICATION**

High humidity can cause increased growth of mold, mildew and musty odors.
