

Uniti

Meet the Uniti family

Transform your listening life

The award-winning Uniti family of music-streaming players is the smart but simple way to enjoy music, radio and better TV sound in any or every room.

Class-leading performance combines with excellent build quality and usability, wrapped in a beautiful British design that will give you years of entertainment.

Choose from the compact Uniti Atom, the CD-playing Uniti Star and the range-topping Uniti Nova. Then there is the option of the CD-ripping, music-managing Uniti Core to consider. Just add the speakers or headphones of your choice, and enjoy.

Uniti Atom

The music streaming player

Enjoy all your favourite music and radio stations, plus a boost to your TV sound, with the Naim Uniti Atom streaming player. Experience high-quality performance and usability in a stunning design that is built-to-last in Britain.

Uniti Atom is simple to use, but offers a wealth of features, including support for all the major music-streaming services, easy Apple AirPlay 2, Chromecast built-in and Bluetooth playback, plus the ability to work seamlessly with other music systems around your home. Master the Uniti Atom and explore a world of music via the Naim App, with voice-control support for Google Assistant and Apple Siri, too.

Uniti Star

The CD-playing & music streaming player

Enjoy everything from CDs to music-streaming services to radio stations, plus a boost to your TV sound, with the incredibly versatile Naim Uniti Star. You will be appreciating the amazing quality of this premium, British-made player for years to come.

Bring your treasured CDs to life with the Uniti Star's exceptional CD playback, with the option of 'ripping' them to an external storage drive if you want to archive your collection. There is also support for all the major music-streaming services, easy Apple AirPlay 2, Chromecast built-in and Bluetooth playback, plus the ability to work seamlessly with other music systems around your home. The Naim App makes it simple to explore everything Uniti Star has to offer, with a slick remote control and voice commands (Google Assistant and Apple Siri) available.

The ripping way to get more from your CDs

The custom-integrated CD drive benefits from faster-than-playback read rates; Uniti Star reads the disc first, extracts the most accurate audio, buffers it into its RAM and then serves up the best sound possible – all without any delay to playback. You can also create bit-perfect 'rips' of your CDs: Uniti Star has an Exact Audio Copy (EAC) component to extract the audio and generate either WAV or FLAC lossless files you can enjoy on any UPnP streaming system in your home, or on personal digital players anywhere.

Uniti Nova

Our most powerful music streaming player

For the ultimate in room-filling power, no other music-streaming player beats a Naim Uniti Nova. Delight in exceptional sound from all your favourite music and radio stations, and even give your TV a big sonic boost. Designed and built in Britain for both looks and longevity, Uniti Nova is true class act.

Despite offering more of everything, Uniti Nova remains easy to use. Within minutes, you can be enjoying all the major music-streaming services, easy Apple AirPlay 2, Chromecast built-in and Bluetooth playback, and even explore the seamless multi-room music capabilities. Navigate your Uniti Nova's many talents via the Naim App, with a high-quality remote control offering more options, alongside voice-control support for Google Assistant and Apple Siri.

Exceptional quality and performance

Uniti Nova features outstanding technology that sets it apart from the rest of the range. In service of exceptional sound, it uses the highest-quality discrete components, a large toroidal transformer, superior isolation, additional inputs and more powerful amplification.

Uniti Core

Your entire music collection in one powerful hub

Uniti Core is the ultimate music manager, able to create bit-perfect copies of your favourite CDs and serve them and the rest of your digital music collection up to all the music players around your home. Superb sound is matched by exceptional British design and build-quality; Uniti Core will be your entertainment hub for many years to come.

Rip and catalogue perfect copies of your CDs, which you can then store on Uniti Core itself – it can house drives holding up to 100,000 tracks, or manage even larger collections on external drives, all with easy access via the Naim App. As well as being a brilliant back-up for your CD collection, and a magnificent multi-room music server, Uniti Core can also act as a superb music source in its own right – simply connect to a digital-to-analogue converter (DAC), or an amp with digital inputs.

Expertly crafted and built to last

Uniti is crafted, inside and out, from aluminium – chosen for its looks, durability, and to prevent the magnetic distortion other materials can suffer from. Its casework is first machined with computer-controlled liquid-cooled cutting equipment, for absolute dimensional precision. It's then brushed and anodised to offer a beautiful yet robust appearance, with a tough, scratch-and-dent resistant design ready for many years of musical enjoyment.

Keeping it cool; making it last

Uniti's striking heat-sinks are directly coupled to the player's floor, providing excellent thermal contact and heat transfer. This means heat is removed from the circuitry quickly and efficiently, even when your Uniti amplifier is powering out serious sounds. This thermal stability ensures consistent performance and long component life, two key parameters to Naim design.

Tactile volume control

The Uniti range feature digitally controlled analogue volume controls. Dial your sounds up or down using the buttery smooth and beautifully illuminated, top-mounted volume control, first conceived for our flagship Naim Statement.

Banishing bad vibrations

Uniti's thick aluminium walls absorb unwanted vibrations and help protect the core internal electronics from detrimental magnetic influences. Even the mounting of the printed circuit boards to the chassis is controlled to limit the effects of microphony on the precision audio components.

The best components, made better

Uniti players each feature a premium Burr Brown digital-to-analogue converter (DAC), and analogue filter sections and output stages constructed from high-end components. They also have an incredibly powerful new 4th Generation 40-bit SHARC DSP processor, running custom software especially written by Naim. This implements 16 times oversampling and digital filtering, enhancing sound quality even further.

Store and share your music

Both Uniti Star and Nova let you plug in an external USB drive, or SD card, with up to 20,000 tracks of your own music, which you can browse and play through the Naim App. This music store is also visible to other Naim connected systems on your network, and can serve up to four of them at once.

Wireless or wired: your choice

Uniti features enhanced, dual-band Wi-Fi connectivity, but can also be used with a direct Ethernet connection to your internet router. When 'hard wired' in this way, the Wi-Fi interface is disabled, reducing radio-frequency (RF) interference for the ultimate sound quality.

Bigger buffer keeps the music playing

Even the most robust internet connection can suffer from occasional drop-outs – something Uniti is designed to minimise, and keep the music playing. It has sufficient memory to buffer up to five minutes of audio.

Boost your TV sound

Easily connect Uniti to your TV via HDMI ARC, and experience transformed sound quality from your favourite shows, films and games. Control your TV's volume from its own remote, for a simple life. Uniti's HDMI connection features galvanic isolation, to ensure that 'noise' from the TV power supply or indeed any other devices connected to the TV do not affect the sonic performance when playing any source.

Musical power choices

Uniti is powered by Class A/B amplification, using technology from our iconic NAIT integrated amplifiers. The main reason we choose Class A/B is the main reason Naim does anything: in the quest for the ultimate musical performance, with our signature pace, rhythm and timing. It also means Uniti is compatible with a wide variety of speakers, giving you more options.

Enhanced digital performance

Uniti benefits from enhanced digital connectivity, choosing to use a system with lower jitter and interference – all in the service of more accurate sound reproduction. Instead of using basic S/PDIF digital connectivity, Uniti uses Low Voltage Differential Signalling (LVDS) – the same highly accurate technology found in flagship Naim streaming products, such as the ND 555 even further.

Future-proof streaming technology

Uniti runs on Naim's unique, state-of-the-art music-streaming platform. This incredibly powerful, high-resolution 'brain' is able to handle both today's popular music services and be ready for new technologies, giving you plenty of listening pleasure to look forward to.

All for your listening experience

Spotify®
Connect

Discover millions of songs from the world's most popular streaming service with the built-in Spotify Connect feature.

TIDAL

The lossless high definition streaming service is integrated into Uniti for an immersive, high-quality sound experience.

Qobuz

Qobuz allows you to stream the most comprehensive CD-quality music catalogue currently available and the largest selection of albums in true high-resolution studio quality directly to your Naim music streamer.

HDMI ARC

Uniti players feature an HDMI ARC (Audio Return Channel) connection so you can easily connect your TV to experience audiophile sound quality from your favourite film or game.

AirPlay 2 &
Apple Music

Stream music from your iPhone, iPad or iPod Touch or from iTunes and Apple Music.

Chromecast
built-in

This smart streaming service creates a seamless link to hundreds of supported apps from your smartphone or tablet and streams directly to your Uniti system.

Bluetooth
aptX HD

Pair your Uniti with any compatible Bluetooth device for simple high-quality playback of music from that device.

Multiroom &
Party Mode

Fill your entire home with the Naim sound using Multiroom and Party Mode. With two or more Uniti products on your home network, you can play back the same music beat-for-beat in up to six rooms, all controlled via the Naim App.

iRadio

Tune in to thousands of available internet radio stations and podcasts or curate your favourites for quick access later. Uniti Star and Uniti Nova have an optional DAB+/FM module upgrade.

CD Playback
& Ripping

Uniti Star allows you to enjoy your entire CD collection, as well as your digital favourites. Create bit-perfect copies of your CDs and save the data to local storage (Uniti Star, Uniti Core) or to internal storage (Uniti Core)

USB

Connect your smartphone, tablet, memory stick or USB hard drive via the front or back panel USB connections for playback and charging of devices.

Multiple
Digital &
Analogue
Inputs

Integrate Uniti with all your audio sources using the digital inputs for TVs, set-top boxes or games consoles, as well as analogue sources such as a turntable (phono stage required).

Headphones

Front panel 3.5mm headphone jack with new upgraded headphone amplifier with significantly improved bass extension.

File Format
Support

Play back lossless music files in WAV, FLAC, AIFF and ALAC formats or stream MP3, AAC and Ogg Vorbis. All Uniti players also support DSD64 & 128 playback with gapless seek to time on all file formats.

UPnP™
Streaming

Use UPnP™ (Universal Plug and Play) to read music from storage, or PCs and Macs on the same network as your Uniti, control it all with the Naim App and enjoy playback at up to 32bit/384kHz resolution.

Wireless
Updates

Over-the-air updates via the Naim App will enable you to update your Uniti system at the touch of a button.

Control, explore, curate

Swipe, click or speak: it's your choice

Available from

Master your Uniti and explore everything it has to offer via the Naim App. All your listening options – music streaming services, radio, and more – are just a touch away, and it is simple to curate all your favourite albums, playlists and tracks.

Access and control any Naim system on your network; bring them together as an awesome multi-room system with just one touch. Software updates that bring yet more functionality to your Uniti are just an App tap away, too.

Prefer a handset? Uniti comes with an intelligent remote control that pairs with your player as soon as it's unboxed and powered up. It's a bidirectional design that doesn't rely on line of sight, and has beautifully backlit buttons.

Finally, the Uniti range also features voice-control support for Google Assistant and Apple Siri, with further options in development.

Multi-room music made easy

Experience superb sound anywhere or everywhere

Uniti players work seamlessly with other Naim music-streaming products, from Mu-so wireless speakers to dedicated hi-fi separates. Choose the same song in beat-perfect sync or play different music in different rooms. Pair up to 5 systems with a simple tap of the Naim App.

As you would expect with the super-flexible Uniti family, there are other ways to multi-room, too. You can also pair Uniti players with other AirPlay 2-compatible wireless speakers via the Apple Home app, or with other Chromecast built-in devices via the Google Home app.

Mu-so 2nd Generation, wireless music system

The Naim Audio difference

Putting music first for almost 50 years

Creating the world's most advanced audio technology starts and ends with the music we all love. We are proud of our engineering expertise and handcrafted manufacturing. But, above all, we are music lovers, dedicated to bringing you the best possible listening experience.

We've been doing it every single day since our founder, Julian Vereker MBE (1945 - 2000), built the first Naim amplifier in 1973. He was driven by nothing more than a desire to experience music in his home as it was when he heard it live.

This is our founding belief, and though the methods we use to achieve this have and will continue to change, our ultimate aim will remain - to create a deeper more immersive music experience.

Julian Vereker
