

INTRODUCING THE

DELKIN DEVICES DASHCARD

THE LONGEVITY microSD MEMORY CARD FOR ALL DASH CAMS

**RATED FOR OVER 70,000 HOURS
NEVER MISS AN IMPORTANT INCIDENT WITH DASHCARD**

WHAT DRIVES YOUR DASH CAMERA?

Most memory cards on the market do not meet the demands of dash cameras. They are simply memory cards that users pick up online because they say microSD. As Dash Camera Users quickly realize, that is not good enough and they experience cards that fail.

Dash Cameras write to a memory card in two ways:

1. Writes Sequentially to the entire card until it is full, then it Records over
2. Records Continuously, but only Writes to the Card **IF** there is an incident

Delkin Devices DASHCARD is designed and built specifically for the continuous recording required for Dash Cameras. That means that they are built for more.

More longevity, more endurance, simply more hours.
