<b>Cleaning Tools</b>	E-Cloth <sup>®</sup> Microfiber Home Cleaning Set for Chemical Free Cleaning*, Scotch Brite <sup>®</sup> pink or blue sponges

\* Green cleaning alternative

## CLEANING STAINLESS STEEL

Remove food particles and stains first, by wiping down the stainless surfaces with a damp cloth, then dry the surface. Apply a stainless steel cleaner with a microfiber cloth. Make sure to wipe the surface dry after applying the cleaner. Once the surface is cleaned, apply a stainless steel polish to prevent future food stains and fingerprints.

*\* Do not soak any stainless steel parts- including the shelving, in water to clean. Instead, allow parts to come to room temperature and clean with a blue or pink Scotch Brite pad to remove stubborn stains.*

## GLASS DOOR CLEANING

Wipe any food particles or stains from the window first, then clean window with a glass door cleaner and lint-free cloth till dry to avoid streaking. If streaking occurs, make a 50/50 ratio of white vinegar to distilled water and clean with a lint-free cloth.

## INTERIOR CLEANING

First, remove all bins and shelves from the interior. Wipe the entire interior with a mild detergent solution and cloth. If any food particles or stains persist, use a blue or pink Scotch Brite pad to remove with the same mild detergent solution. Dry interior with a microfiber cloth.

Clean all the removed shelves and bins with the same mild detergent solution. DO NOT soak any parts to avoid any rusting or damage. Dry all parts with a microfiber cloth before reinstalling in the unit.

## OUTDOOR AND MARINE GRADE PRODUCTS

Wipe down exterior surfaces daily with a microfiber cloth to remove any deposits and avoid any rusting.

Use the same cleaning products and steps as the indoor models.
