It just fits.

Easy connectivity and built-in wireless make Apple TV right at home in your home entertainment system.

Plug-and-play time.
Got a widescreen TV? Got iTunes? Then you're ready for Apple TV. Connect Apple TV to your TV and open iTunes on your computer. iTunes wirelessly detects Apple TV and walks you through a simple setup.

Relax and unwire.
If you don't have a wireless network, you can set one up easily with a wireless access point like the superfast 802.11 AirPort Extreme Base Station. Newer AirPort Extreme-enabled Macs let you create a wireless network using only your computer. And if you have a Mac or PC without wireless capability, you can connect Apple TV to your network using an Ethernet cable (sold separately).

What you need.
- Widescreen TV
- Mac or PC
- iTunes 7.1
- Wired or wireless network
- HDMI cable or
- Component video cables and analog audio cables or optical audio cable

One step. Great leap.
Apple TV connects to your widescreen TV via an HDMI cable (sold separately). This simple connection delivers both audio and video to your TV — no need for multiple cables.

Options open.
If your TV's HDMI port is occupied by another device, or if your TV doesn't have an HDMI port, you can connect to Apple TV via component video and audio. So no matter what your entertainment system looks like, Apple TV connects easily. And since Apple TV has a built-in power supply, there's no unwieldy power brick to hide.
