

BRANE AUDIO

An Audio Breakthrough Decades in the Making

Brane Audio was founded in 2015 to explore fundamental new sound technologies. With decades of electro-mechanical device and development research, Brane created the most significant commercial improvement in audio driver technology in over a century.

Brane X: The Portable Speaker Revolution

Brane Audio's flagship product, Brane X, is the world's first portable speaker with a true subwoofer built-in. Its proprietary Repel-Attract Driver (RAD) delivers a 10x increase in sub-bass without any sacrifice in overall size or power consumption.

Defying the Laws of Audio

Hofmann's Iron Law has governed speaker engineering for a century. The longstanding audio law states that in order to produce deep bass, a speaker must either be large or draw a tremendous amount of electrical power.

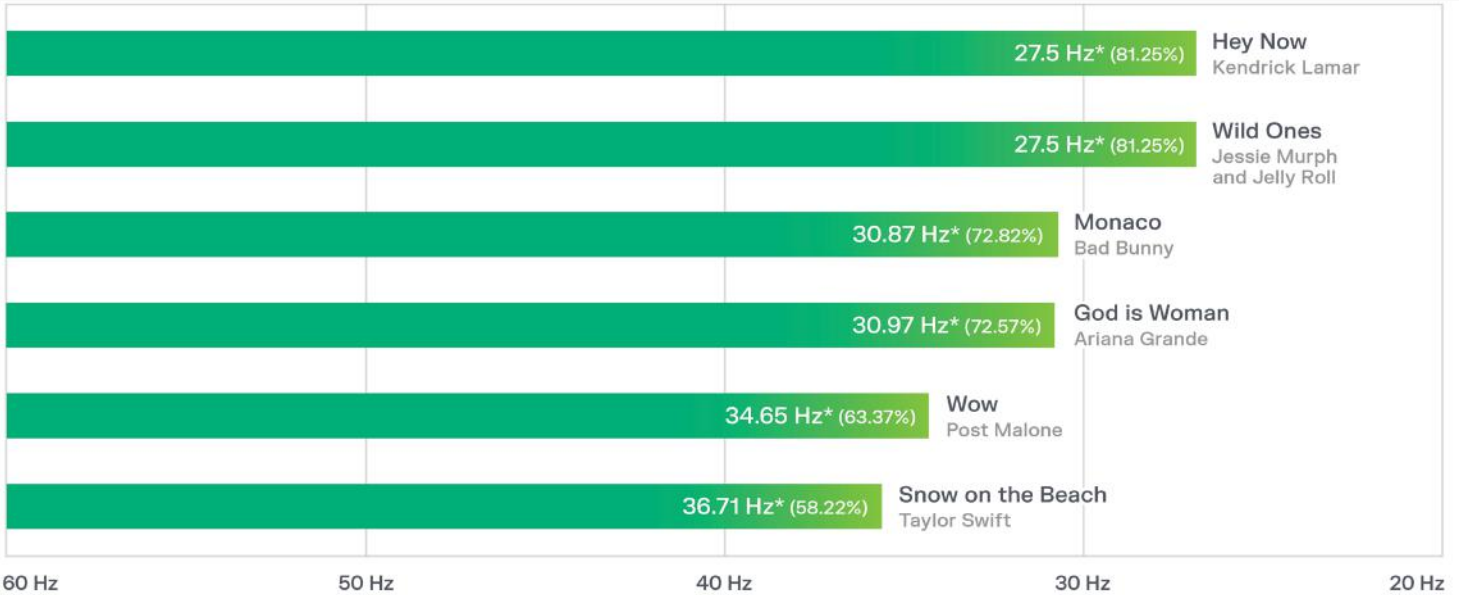

In other words, no speaker on the market today can be simultaneously small, efficient, and produce deep bass—until now.

RAD redefines what's possible in audio by using an array of custom magnets to cancel internal air pressure forces. This breakthrough allows Brane speakers to deliver incredible bass while staying both small and efficient. The same technology works across all speaker sizes, from tiny earbuds to expansive festival sound systems.

Only Brane X can hit the majority of sub-bass notes.

- Wi-Fi Enabled
- Voice Assistant Built-In
- 12-Hour Playback
- Adjustable EQ & Bass
- Bluetooth Enabled
- Proprietary RAD Subwoofer
- Party & Stereo Modes
- Soundbar & Auxiliary Mode
- Wireless Grouping
- IP57 Waterproof
- Streaming Capabilities
- Companion App
