* Supported features may vary based on the operating system of the mobile phone.
The video quality when recording with DJI Mimo may not match that of the original mobile camera due to the limited interfaces provided by mobile manufacturers. For improved video quality, go to Playback in DJI Mimo, select a video, tap the icon in the bottom right corner, and tap Stabilization. DJI Mimo V1.8.0 or later is required.
The Counter Weight Set is necessary for certain mobile phones with multiple cameras or large camera modules. Contact DJI Support for more information.

1 The latest operating system of the mobile phone is required.
2 ActiveTrack 7.0 performance varies based on the capabilities of the mobile phone. This feature will be continuously optimized for compatibility with a broader range of mobile phones.
3 The mobile phone must be connected to the gimbal via Bluetooth in the system settings.
4 Only mobile phones with Qualcomm chips are supported.
5 Only mobile phones with Orion chips are supported. If you encounter any issues, update to the latest operating system and try again.

1 The supported zoom ratio for certain smartphones matches that of the system camera (DJI Mimo V2.2.8 or later is required).
2 The mobile phone must be connected to the gimbal via Bluetooth in the system settings.
3 This feature is compatible with Osmo Mobile 8 and later models, and supports iOS apps that use the system camera for photos or videos. DockKit tracking will be available upon connection. For any incompatible apps, please consult Apple or the app developer.
