

HOW DOES THE STEAMCLEAN OPTION WORK?

STEP 1

The user selects the SteamClean option. The cycle begins with the main wash, which removes and cleans large soils from dishes.

STEP 2

After the main wash, steam is created by heating water in the bottom of the tub. The steam circulates throughout the dishwasher for 24 minutes, loosening and cleaning away any remaining soils on glassware.

STEP 3

The cycle ends with a high temperature rinse to remove loosened soils and to achieve the ultimate cleaning results!

FREQUENTLY ASKED QUESTIONS

Isn't steam already created in a dishwasher?

Yes. However, in a regular dishwasher, steam is generated during the dry cycle when water is being removed from dishes. The SteamClean option creates steam during the wash cycle and uses it to gently clean soils and spots from glassware.

Will the SteamClean option add extra time to the cycle? Is the dishwasher still energy efficient?

Yes. When selected, the option adds just 24 minutes to cleaning time. Yet, the dishwasher is still ENERGY STAR® qualified.

Is the SteamClean option safe for my crystal stemware and fine china?

Yes. The SteamClean option is gentle, yet thorough enough, to clean even your most fragile glassware right the first time, every time.

GET GLASSWARE CLEAN WITH THE POWER OF STEAM

Introducing the uncompromising cleaning power of steam with the classic durability of Maytag brand. The SteamClean option creates high-heat steam to loosen and rinse away soils and spots from glassware. Plus, it's thorough, yet gentle enough to clean your crystal stemware and fine china.
