

In-Ear Headset with Mic and 3-Button Remote

IMAGE S4i

Need a sonic soul mate for your iPod or iPhone? Meet the Image S4i, an in-ear headset that offers premium sound, unbeatable comfort, full music control and highly intelligible phone calls.

Breakthrough Design

Thanks to its advanced 3-button mic and remote system, the Image S4i is the first third-party headset to offer full control of your iPhone, iPod touch and iPod music and video content.*

The S4i positions its mic and remote at the cable yoke to create a more natural feel when answering calls and controlling music. The mic is a highly intelligible 360° design with echo cancellation, so you'll always be heard crystal clear.

Amazing Comfort and Fit

Our patented oval ear tips naturally fit the contours of your ear canals, providing a secure fit and comfortable long-term wear. You'll also get superior noise isolation, a characteristic that lets you enjoy music at lower, safer volumes, as well as achieve excellent bass response.

Premium Sound

The Image S4i delivers award-winning sound performance—bold bass, sizzling percussion and smooth vocals. In fact, the S4i sounds a lot more expensive than it actually is thanks to an exclusive micro speaker in each ear piece.

Added Frills

The Image S4i comes with a 2-year warranty, 3 different-sized ear tips, an ear tip cleaning tool, a premium carrying pouch and a clothing clip.

*Compatibility

The remote and mic are supported only by iPhone 3GS, iPod nano (4th generation), iPod Classic (120GB), and iPod touch (2nd generation), MacBook, Macbook Pro and Mac Pro (2009 models). The remote is supported by iPod shuffle (3rd generation). Requires latest iPod software. Audio is supported by all iPod models. Mic and call/music button control features functional with 1st generation iPhones and iPhone 3G. Volume Controls are not compatible with 1st generation and 3G iPhone. Also compatible with VOIP, Skype, iChat, and audio recording applications.

- Advanced 3-button mic and remote system
