

GENEVA SOUND SYSTEM MODEL S

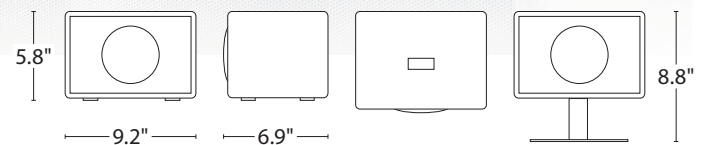

Geneva Sound System Model S is the smallest true hi-fi system in the Geneva family, less than six inches high, yet with full-sized high fidelity. The *Financial Times* says "it's absolutely delightful – so beautiful, and manufactured to such a sublime standard, that I just wanted to stroke it, let alone listen to its precise Swiss sound."

With its patented technology for true stereo imaging, wide frequency range and exceptional audio qualities, many independent reviewers around the world has given the Model S the highest marks in its class.

Winner of the 2010 *I.D.* International Design Magazine Consumer Products Award, Model S introduces innovations that make hi-fi easier, and more eye-pleasing: a new PowerDock connector for iPod/iPhone, new TouchLight controls, and a digital radio with alarm clock. TouchLight controls brighten on hand contact, giving extensive iPod menu control, without touching the iPod/iPhone for a convenient control. When the iPod/iPhone is removed, the motorized PowerDock spins closed to protect it.

There's a choice of three colors. An optional table stand and a remote control are included.

DIMENSIONS

WHAT'S INSIDE
