## PRODUCT MODEL NUMBERS

MEDX500X, MEDX550X, MEDX600X, MEDX700A, MEDX700X

## Installation clearances:

The location must be large enough to allow the dryer door to open fully.

## Dryer Dimensions

*Most installations require a minimum 5½" (140 mm) clearance behind the dryer for the exhaust vent with elbow. See "Venting Requirements."
A. Large opening side-swing door
B. Wide opening hamper door

Minimum spacing for recessed area or closet installation

## Installation spacing for recessed area or closet installation

The dimensions shown below are the recommended spacing for this dryer.
■ Additional spacing should be considered for ease of installation and servicing.
■ Additional clearances might be required for wall, door, floor moldings, and dryer venting.

- Additional spacing of 1 " $(25 \mathrm{~mm})$ on all sides of the dryer is recommended to reduce noise transfer.
- For closet installation, with a door, minimum ventilation openings in the top and bottom of the door are required. Louvered doors with equivalent ventilation openings are acceptable.
■ Companion appliance spacing should also be considered.

## ELECTRICAL REQUIREMENTS

To supply the required 3 or 4 wire, single phase, 120/240 volt, 60 Hz ., AC only electrical supply (or 3 or 4 wire, 120/208 volt electrical supply, if specified on the serial/rating plate) on a separate $30-\mathrm{amp}$ circuit, fused on both sides of the line. A time-delay fuse or circuit breaker is recommended. Connect to an individual branch circuit.

## VENTING REQUIREMENTS

Exhaust venting: Exhaust your dryer to the outside. 4" (102 mm) diameter vent is required. Rigid or flexible metal exhaust vent must be used. Do not use plastic or metal foil vet. Exhaust hood must be at least 12" ( 305 mm ) from the ground or any object that may be in the path of the exhaust.

## Exhaust hoods:

## Recommended Styles:

Louvered Hood

Box Hood

## Acceptable Style:

Angled Hood

## Determine vent path:

■ Select route that will provide straightest and most direct path outdoors.

- Plan installation to use fewest number of elbows and turns.
- When using elbows or making turns, allow as much room as possible.
- Bend vent gradually to avoid kinking.

■ Use as few $90^{\circ}$ turns as possible.

## Determine vent length and elbows needed for best drying performance:

■ Use following Vent System Chart to determine type of vent material and hood combinations acceptable to use.

NOTE: Do not use vent runs longer than those specified in Vent System Chart. Exhaust systems longer than those specified will:

- Shorten life of dryer.

■ Reduce performance, resulting in longer drying times and increased energy usage.

The "Vent System Chart" provides venting requirements that will help achieve best drying performance.

| Vent System Chart |  |  |  |
| :---: | :---: | :---: | :---: |
| Number of <br> $90^{\circ}$ turns <br> or elbows | Type <br> of vent | Box/louvered <br> hoods | Angled <br> hoods |
| $\mathbf{0}$ | Rigid metal | $64 \mathrm{ft} .(20 \mathrm{~m})$ | $58 \mathrm{ft} .(17.7 \mathrm{~m})$ |
| $\mathbf{1}$ | Rigid metal | $54 \mathrm{ft} .(16.5 \mathrm{~m})$ | $48 \mathrm{ft} .(14.6 \mathrm{~m})$ |
| $\mathbf{2}$ | Rigid metal | $44 \mathrm{ft} .(13.4 \mathrm{~m})$ | $38 \mathrm{ft} .(11.6 \mathrm{~m})$ |
| $\mathbf{3}$ | Rigid metal | $35 \mathrm{ft} .(10.7 \mathrm{~m})$ | $29 \mathrm{ft} .(8.8 \mathrm{~m})$ |
| $\mathbf{4}$ | Rigid metal | $27 \mathrm{ft} .(8.2 \mathrm{~m})$ | $21 \mathrm{ft} .(6.4 \mathrm{~m})$ |

NOTE: Side and bottom exhaust installations have a $90^{\circ}$ turn inside the dryer. To determine maximum exhaust length, add one $90^{\circ}$ turn to the chart.
