**Electrical:** A 115-volt, 60 Hz, AC-only, 15 or 20 amp, fused, electrical supply is required. A time-delay fuse or circuit breaker is recommended. It is recommended that a separate circuit serving only this appliance be provided.

**Water Supply:** A cold water supply with water pressure of between 30 and 120 psi is required to operate the water dispenser and ice maker.

If a reverse osmosis water filtration system is connected to your cold water supply, the water pressure to the reverse osmosis system needs to be a minimum of 40 to 60 psi.

The cabinet depth refrigerator can be installed into a recessed opening, at the end of cabinets or as a freestanding refrigerator.

Do not install the refrigerator near an oven, radiator, or other heat source, nor in a location where the temperature will fall below 55°F.
