IMPORTANT SAFETY INSTRUCTIONS

READ AND SAVE THESE INSTRUCTIONS

This appliance complies with current safety requirements. Improper use of the appliance can lead to personal injury and material damage.

Read all instructions before installing or using the appliance for the first time. Only use the appliance for its intended purpose.

Keep these operating instructions in a safe place and pass them on to any future user.

Use

- This appliance is intended for residential use only. Use only as described in these operating instructions.
- This ventilation hood is not intended for outdoor use.
- It must only be used to extract and clean vapors produced during cooking. Any other use occurs at the owner's own risk.
- This appliance is suitable for installation above gas or electric cooking surfaces.
- Persons who lack physical, sensory or mental abilities, or experience with the appliance should not use it without supervision or instruction by a responsible person.
Children

► As with any appliance, close supervision is necessary when used by children.

► Please supervise children in the vicinity of the hood and do not let them play with it.

► The LED ClearView lighting is very intense. Ensure that especially babies/small children don't look into the light.

► Danger of suffocation! Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of children.

Technical safety

► WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

– Use this appliance only in the manner intended by the manufacturer. If you have questions, contact Miele.

– Before servicing or cleaning the appliance, switch power off at the service panel and lock the service disconnecting means to prevent power from being switched on accidentally. If the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

► Installation, repair and maintenance work should be performed by a Miele authorized service technician in accordance with national and local safety regulations and the provided installation instructions. Contact Miele’s Technical Service Department for examination, repair or adjustment. Repairs and other work by unauthorized persons could be dangerous and may void the warranty.

► A damaged ventilation hood can be dangerous. Always check for visible signs of damage. Never use a damaged ventilation hood.
Be certain your appliance is properly installed and grounded by a qualified technician. To guarantee the electrical safety of this appliance, continuity must exist between the appliance and an effective grounding system. It is imperative that this basic safety requirement be met. If there is any doubt, have the electrical system of the house checked by a qualified electrician.

Reliable and safe operation of this hood can only be guaranteed if it has been connected to the electrical supply.

To avoid damaging the ventilation hood, make sure that the connection data (voltage and frequency) on the data plate correspond to the building's power supply before connecting the appliance. When in doubt, consult a qualified electrician.

Do not use a power bar or extension cord to connect the ventilation hood to electricity. These are a fire hazard and do not guarantee the required level of appliance safety.

To ensure safe operation, only use the ventilation hood after it has been properly installed.

This ventilation hood may not be used in non-stationary locations (e.g. on a ship).

Adequate ventilation must be provided when the hood is operated simultaneously with devices that burn gas or other fuels.

Only open the housing as described in the enclosed "Installation diagram" and in the "Cleaning and care" section of this manual. Under no circumstances should any other parts of the housing be opened. Tampering with electrical connections or components and mechanical parts is highly dangerous to the user and can cause operation faults.

Defective components should be replaced by Miele original parts only. Only with these parts can the manufacturer guarantee the safety of the appliance.
IMPORTANT SAFETY INSTRUCTIONS

► If the power cord is damaged, it must only be replaced by a qualified service technician.

► During installation, maintenance, and repair work, the ventilation hood must be disconnected from the electrical supply. It is only completely isolated from the electricity supply if one of the following applies:
  – The circuit breakers on the electrical service panel are tripped.
  – The screw-type fuses on the electrical service panel have been removed.
  – The power cable (if present) has been unplugged from the socket (pull the plug not the cord).

Proper use

► WARNING: TO REDUCE THE RISK OF A COOKTOP GREASE FIRE:
  – a) Never leave surface units unattended at high settings. Boilovers cause smoking and greasy spillovers may ignite. Heat oils slowly on low or medium settings.
  – b) Always turn the hood on when cooking at a high heat.
  – c) Clean the ventilation hood frequently. Grease should not be allowed to accumulate on the fan or filter.
  – d) Use the proper pan size. Always use cookware appropriate for the size of the cooking area.

► Never use an open flame beneath the ventilation hood. To avoid the risk of fire, do not flambé or grill over an open flame. When turned on, the ventilation hood will draw any flames into the filter. Fat deposits may ignite.

► WARNING: TO REDUCE THE RISK OF INJURY TO PERSONS IN THE EVENT OF A COOKTOP GREASE FIRE, OBSERVE THE FOLLOWING*:
IMPORTANT SAFETY INSTRUCTIONS

- a) SMOTHER FLAMES with a close fitting lid, cookie sheet, or metal tray then turn off the burner. BE CAREFUL TO PREVENT BURNS. If the flames do not go out immediately, EVACUATE AND CALL THE FIRE DEPARTMENT.

- b) NEVER PICK UP A FLAMING PAN - You may be burned.

- c) DO NOT USE WATER, including wet dishcloths or towels - a violent steam explosion will result.

- d) Use a fire extinguisher ONLY if:
  - 1) You have a class ABC extinguisher, and you know how to operate it.
  - 2) The fire is small and contained in the area where it started.
  - 3) The fire department is being called.
  - 4) You can fight the fire with your back to an exit.

*Based on "Kitchen Fire Safety Tips" published by NFPA.

The ventilation hood may become damaged if exposed to excessive heat from a gas cooktop.

- When using the ventilation hood over a gas cooktop, ensure that any burners in use are always covered by cookware. Turn burners off when removing the cookware, even if doing so for just a short time.

- Select cookware that is suitable for the size of the burner.

- Adjust the flame so that it never extends up the sides of the cookware.

- Avoid overheating the cookware (e.g., when cooking with a wok).

Always turn the ventilation hood on whenever a burner is in use to prevent damage from condensation.

Overheated oil and fat can ignite, causing fire damage to the ventilation system. Do not leave cookware, pans, and deep fryers unattended when cooking with oil or fat. Similarly, never leave an open grill unattended when grilling.
IMPORTANT SAFETY INSTRUCTIONS

- Fat and debris deposits impair the proper functioning of the ventilation hood. To ensure that cooking vapors are properly cleaned, never use the ventilation hood without the grease filters in place.
- There is a risk of fire if cleaning is not completed according to the instructions in this manual.
- Please note that the heat rising from the stovetop during cooking can cause the ventilation hood to become very hot. Do not touch the housing or the grease filters until the ventilation hood has cooled down.
IMPORTANT SAFETY INSTRUCTIONS

Proper installation

» WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

- a) Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.

- b) Sufficient air is needed for combustion and exhausting of gases through the flue (chimney of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer’s guideline and safety standards such as those published by the National Fire Protection Association (NFPA) and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and the local code authorities.

- c) When cutting or drilling into the wall or ceiling, do not damage electrical wiring and other hidden utilities.

- d) Ducted hoods must always be vented to the outdoors.

- e) Do not use this hood with any solid-state speed control device.

» To determine whether a ventilation hood may be operated above your cooking appliance, please refer to the information provided by the appliance's manufacturer.

» Safety regulations prohibit the installation of a ventilation hood above solid fuel stoves.

» Insufficient distance between the cooking appliance and the ventilation hood can result in damage to the hood. The minimum safety distances between the appliance and the bottom of the ventilation hood specified in the "Installation" section must be maintained, unless the appliance's manufacturer has indicated that a greater distance is required. If more than one cooking appliance is used beneath the ventilation hood, and if different minimum safety distances apply for these appliances, you should use the greater distance.
IMPORTANT SAFETY INSTRUCTIONS

▶ Be sure to observe the information contained in the "Installation" section when mounting the ventilation hood.

▶ Metal parts can have sharp edges which may cause injury. Wear gloves to protect your hands from being cut.

▶ When installing the exhaust duct, only use pipes or tubes made of non-flammable material. These can be obtained from your Miele dealer or from Miele Technical Service.

▶ Exhaust air should not be vented into a chimney or vent flue which is otherwise in use and should not be channeled into ducting which ventilates rooms with fuel-burning installations.

▶ If exhaust air is to be extracted into a chimney or vent flue no longer used for other purposes, be sure to comply with all applicable regulations.

▶ WARNING: TO REDUCE THE RISK OF FIRE USE ONLY METAL DUCTWORK.
IMPORTANT SAFETY INSTRUCTIONS

Cleaning and care

➢ Never use a steam cleaner to clean the ventilation hood. The steam can reach the electrical components and cause a short circuit.

Accessories

➢ Use only genuine original Miele parts. If parts or accessories from other manufacturers are used, the warranty will become void.
Caring for the environment

Disposal of the packing material

The cardboard box and packing materials protect the appliance during shipping. They have been designed to be biodegradable and recyclable.

Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of children. Danger of suffocation!

Disposal of your old appliance

Electrical and electronic appliances contain valuable materials. They also contain certain substances, compounds and components which were essential for the proper functioning and safe use of the equipment. Handling these materials improperly by disposing of them in your household waste can be harmful to your health and the environment. Therefore, please do not dispose of your old appliance with regular household waste and follow local regulations on proper disposal.

Consult with local authorities, dealers or Miele in order to dispose of and recycle electrical and electronic appliances. Miele assumes no responsibility for deleting any personal data left on the appliance being disposed. Please ensure that your old appliance is kept away from children until removal. Observe safety requirements for appliances that may tip over or pose an entrapment hazard.
Guide to the appliance

1. Telescopic chimney
2. Chimney
3. Canopy
4. Control panel
5. Grease filter
6. Recirculation vent
   (only for recirculation mode)
7. Overhead LED ClearView lighting
8. OdorFree Charcoal Filter
   Optional accessory for recirculation mode
9. On/Off button for fan
10. Buttons for setting the fan power
11. On/Off touch control for the overhead LED ClearView lighting
The following functions are available on your ventilation hood, depending on the model:

**Vented mode**

![Vented mode diagram]

The air is drawn in and cleaned by the grease filters and directed outside.

**Non-return flap**

A non-return flap in the ducting prevents the exchange of inside and outside air from occurring when the ventilation hood is not in use. The flap is closed when the ventilation hood is turned off. When the ventilation hood is turned on, the non-return flap opens so that the exhaust air can be transported outside without any obstruction.

A non-return flap has been provided with the hood in case your ducting does not have one. It is inserted into the outlet duct collar of the fan.

**Recirculation mode**

The recirculation mode requires a recirculation kit and OdorFree Charcoal Filter (available as optional accessories, see "Technical Data" for more information)

![Recirculation mode diagram]

The air is drawn in and first cleaned by the grease filters and then by an OdorFree Charcoal Filter. The cleaned air is then recirculated back into the kitchen.
Operation

Turning on the blower
- Press the On/Off button 🔄.

The blower turns on at level 2. The 🔄 symbol and 2 will light up in the blower level display.

Selecting the power level
Power levels 1 to 3 can be used for light to heavy cooking vapors and odors.

For strong vapors and odors that are temporarily produced when cooking, e.g., during searing, select the B booster level.
- Press the "−" button for a lower power level or the "＋" button to select a higher level.

Reducing power of the booster level
If power management is activated (default setting), the fan automatically switches back to level 3 after 5 minutes.

Delayed shut-off
- It is advisable to run the blower for a few minutes after cooking has finished to neutralize any lingering vapors and odors in the air.

Turning off the blower
- Press the On/Off button 🔄 to turn the blower off.

The 🔄 symbol will go out.

Turning the overhead lighting on/off
The overhead lighting can be turned on and off separately from the fan.
- To do so, press the 🗼 button.

The 🗼 symbol is lit when the overhead lighting is turned on.

Power management
The ventilation hood features a power management system to help save energy. The blower power level is reduced and the lighting is turned off automatically.
- If the booster level is selected, the blower automatically switches to level 3 after 5 minutes.
- If the blower is set to level 3, 2 or 1, it switches back one blower setting after 2 hours and then in 30-minute intervals until the blower eventually switches off.
- If the overhead lighting is on, it will switch off automatically after 12 hours.
Operation

Turning power management on/off

You can deactivate power management.
Keep in mind that this may increase energy consumption.

■ To set this option, turn off the fan and the overhead lighting first.
■ Press the − and + buttons at the same time for approx. 10 seconds, until 1 lights up.
■ Then, press the following buttons in succession:
  – the lighting button ☼,
  – followed by the − button and then
  – the lighting button ☼.
If power management is turned on, the 1 and B indicators will be continuously lit.
If it is turned off, the 1 and B indicators will flash.
■ Press the − button to turn power management off.
The 1 and B indicators will flash.
■ To turn it on, press the + button.
The 1 and B indicators will be continuously lit.
■ Confirm your choice with the On/Off button ☑.
All the indicator lights will go out.
If the new setting is not confirmed within 4 minutes, the ventilation system reverts to the previous setting.

Safety shut-off

If power management has been deactivated, the ventilation system will switch itself off automatically after 12 hours if it has been left on (blower and overhead lighting).
■ Pressing the On/Off button ☑ for the blower or lighting ☼ will switch the ventilation system back on again.
This hood operates in a very efficient and energy-saving manner. The following will help you to save even more energy when using it:

– Ensure that there is sufficient ventilation in the kitchen when cooking. If there is insufficient air flow during vented mode, the hood cannot operate efficiently, causing increased operating noise levels.

– Always cook with the lowest possible setting. This produces fewer cooking vapors so that you can use a lower hood power level and therefore benefit from reduced energy consumption.

– Check the power level selected on the hood. A lower power level is generally sufficient for the majority of cooking. Only use the booster level when necessary.

– When a large volume of cooking vapors are being produced, switch to a high power level in good time. This is more efficient than operating the hood for longer to try to capture cooking vapors that have already been distributed throughout the kitchen.

– Make sure that you switch off the hood after use.

– Clean or change the filters at regular intervals. Heavily soiled filters reduce performance, increase the risk of fire and are unhygienic.
Cleaning and care

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

- Before cleaning or servicing the hood, disconnect it from the power supply, see "IMPORTANT SAFETY INSTRUCTIONS".

Stainless steel housing

General information

The surfaces and control buttons are susceptible to scratching and chipping.
Observe the following cleaning instructions.

- Clean all surfaces and control buttons using warm water and liquid dish soap. Apply with a sponge cloth.

Make sure that no water gets into the interior of the hood.
Only use a damp cloth to clean the hood, especially in the control panel area.

- After cleaning, dry the surfaces with a soft cloth.

Avoid the following:
- Cleaners containing soda, acid or chloride, or cleaners containing solvents
- Abrasive sponges, e.g. pot scourers or sponges which have been previously used with abrasive cleaning agents.

Special instructions for stainless steel surfaces

(does not apply to control buttons)

- Stainless steel surfaces can also be cleaned using a non-abrasive stainless steel cleaner, available from Miele.
- To prevent the surfaces from quickly becoming dirty again, we recommend treating them with a stainless steel care conditioner. Apply sparingly over the entire area using a soft cloth.

Important for the controls

Do not leave dirt and debris on the buttons for any length of time. Otherwise they may become discolored or damaged.
Remove any dirt or debris immediately.

- Observe the general cleaning instructions contained in this chapter.

Do not use a stainless steel cleaner to clean the control buttons.
Cleaning and care

Grease filters
The reusable metal grease filters in the appliance remove the solid particles contained in kitchen vapors (fat, dust, etc.), thereby preventing the ventilation hood from becoming dirty.

⚠️ A dirty filter is a fire hazard!

Cleaning intervals
Over longer periods of time, fat buildup on the grease filter hardens and makes cleaning more difficult. Therefore, we recommend cleaning the grease filters once every 3-4 weeks.

Removing the grease filters
During removal, the filter may drop to the ground. This can result in damage to the filter and the cooktop. During cleaning, be sure to hold the filter securely.

Cleaning the grease filters by hand
- Clean the filters with a soft nylon brush in a mild solution of hot water and dish soap. Do not use undiluted dish soap.

Unsuitable cleaning agents
Unsuitable cleaners can cause damage to the filter surfaces if used regularly. Do not use any of the following:
- Lime removers
- Abrasive powders or abrasive liquids
- Aggressive all-purpose cleaners and degreaser sprays
- Oven sprays

Cleaning the grease filters in the dishwasher
- Place the filters as upright as possible in the lower basket. Ensure that the spray arm is not obstructed.
- Use a common dishwashing detergent.
- Select a program with a wash temperature between 120°F (50°C) and 150°F (65°C). In a Miele dishwasher use the "Normal" program.

Depending on the detergent used, cleaning the filters in a dishwasher may cause the inside filter surfaces to become discolored. However, this will not affect the functioning of the filters in any way.

After cleaning
- After cleaning, leave the filters on an absorbent surface to dry.
Cleaning and care

- When removing the filters for cleaning, also clean off any accessible oil or fat buildup from the housing. Doing so will prevent a fire hazard.

- Reinstall the grease filters. When inserting the filters, make sure that the locking clip is facing down.

- If the filters have been installed incorrectly, you can insert a small screwdriver into the slit to disengage the locking clip.
OdorFree Charcoal Filter
If the hood is equipped for recirculation, an OdorFree Charcoal Filter must be installed in addition to the grease filters. This filter is designed to absorb odor-causing agents and is mounted in the canopy above the grease filters.

Charcoal filters are available to order via the Miele Webstore, Miele Service (see end of this booklet for contact details) or directly from Miele.

Installing/replacing the OdorFree Charcoal Filter
- To install or replace the OdorFree Charcoal Filter, the grease filters must first be removed as described above.
- Remove the OdorFree Charcoal Filter from its packaging.
- Press the OdorFree Charcoal Filter into the frame.
- Reinstall the grease filters.

When to change the OdorFree Charcoal Filter
- Always replace the OdorFree Charcoal Filter whenever it no longer absorbs kitchen odors effectively. Replace the filter at least once every 6 months.

Disposing of the OdorFree Charcoal Filter
- Used OdorFree Charcoal Filters can be disposed of with normal household waste.
Cleaning and care

Changing a light bulb

Only use the specified light bulbs. Other bulbs, for example halogen bulbs, may become damaged due to the high generation of heat.

The light bulbs should be replaced with the following:

<table>
<thead>
<tr>
<th>Bulb type</th>
<th>Power</th>
</tr>
</thead>
<tbody>
<tr>
<td>LED, GU10</td>
<td>3W</td>
</tr>
</tbody>
</table>

Light bulbs are available from Miele or specialist dealers.

- Turn off the blower and the lighting.
- The light bulbs can get very hot when in use. Allow the bulbs to cool down for a few minutes before changing them.
- Disconnect the hood from the electrical supply before replacing the light bulbs (see "IMPORTANT SAFETY INSTRUCTIONS").
- Insert the lever supplied into the gap between the bulb and the bulb holder.

The bulb will then drop downwards.

- Grip the light bulb, turn it counterclockwise and take it out.
- Screw the new bulb into the socket and push it upwards. Please follow the manufacturer's safety instructions.
Before installation

⚠ Before installing the appliance, read all of the information contained in this chapter and also in the “IMPORTANT SAFETY INSTRUCTIONS” section.

Removing the protective film

The housing components are covered by a protective film to prevent them from damage during transport.

- Please remove this film before installing the housing components. It can be peeled off easily without any additional tools.

Installation Instructions

Please refer to the accompanying installation sheet for instructions on how to install the appliance.

Leave these instructions with the appliance for the consumer/user.

Information is subject to change. Please refer to our website to obtain the most current product specification, technical & warranty information.

Disassembly

If the device ever needs to be disassembled, follow the installation sheet instructions in reverse order. A lever is provided to assist with the removal of the chimney.

- Unscrew the two mounting screws on the chimney.

- Slide the supplied lever between the chimney and the extension piece.

- Pry the chimney out of its attachment.
Installation

Installation parts
3 protective installation sheets
for use when installing the chimney

1 collar
for exhaust ducting Ø 6" (150 mm).

1 reducing collar
for exhaust ducting Ø 5" (125 mm).

1 non-return flap
for fitting into the exhaust socket on the motor unit (not needed for recirculation mode). Depending on the model, the non-return flap may already be mounted.

Wall brackets
for securing the ventilation system on the wall.

Conversion kit for recirculation mode
contains a directional unit socket and flexible aluminum hose with hose clips (not supplied, available as an optional accessory, see "Technical data").

2 M6 locknuts
for securing the hood.

2 7/8 x 5/16" (3.9 x 7.5 mm) screws
for attaching the chimney.

Keep the following in a safe place:

Installation plan

1 lever
for replacing bulbs and for dismantling the chimney.

8 3/16 x 2 3/8" (5 x 60 mm) screws and
8 5/16 x 2" (8 x 50 mm) plugs
for attaching to the wall.

The screws and plugs are designed for use in solid walls only.
Use different fasteners for other wall construction types.
Make sure that the wall can support the load.
Installation

Appliance dimensions

26 15/16" - 39 9/16" (685 - 1005 mm)
32 1/16" - 44 11/16" (815 - 1135 mm)

The drawing is not to scale.
Installation

1. Extraction
2. Recirculation
3. Air vent positioned at top for recirculation
4. Mounting area (only 4 is required for recirculation hoods). Wall and ceiling area for exhaust duct opening and for wall socket installation. Only the wall socket installation is required for recirculation hoods.

Vent collar Ø 6" (150 mm), with adapter Ø 5" (125 mm).

Distance between cooktop and ventilation hood (S)

Provided a larger distance is not given by the manufacturer of the cooktop, follow the minimum safety distances between a cooktop and the bottom of the hood. Please also observe the information contained in the "IMPORTANT SAFETY INSTRUCTIONS" section.

<table>
<thead>
<tr>

</tbody>
</table>
Installation

Installation recommendations

– A distance of at least 26" (660 mm) is recommended above electric cooktops to provide more workspace and easier cooking under the hood.

– When selecting an installation height, always take the user height into consideration. Users should have ample space to work comfortably on the cooktop and reach the ventilation hood controls with ease.

– Please note that the greater the distance from the cooktop, the less effective the hood is at drawing in the cooking vapors.

– To achieve optimum vapor extraction, the hood must be centered over the cooktop, not to the side.

– The cooktop should be no wider than the hood. Preferably, it should be narrower for better extraction.

– The mounting area must be easily accessible. The ventilation hood should be easy to reach and disassemble in case a service call is necessary. This should be taken into consideration when planning the position of cabinetry, shelves, ceilings or decorative elements in the vicinity of the ventilation hood.

Drilling diagram for wall mounting

- When drilling, please follow the directions contained on the accompanying installation sheet.

- When installing a custom back wall with pre-drilled holes, please refer to the drilling distances in the drawing above (screws ø 3/16" (5 mm)).

* The dimension for the middle wall bracket is variable. It will depend on the position of the wall vent and the socket. It should be set as low as possible.
Plywood backing

The majority of the weight of the installed ventilation system will be supported by the lower retaining plate. It must be firmly attached to the stud framing behind the drywall. If studs are not available in the required locations, a plywood backing (min. ½" (13 mm) thick) spanning at least two studs must be installed. Failure to adequately support the weight as stated may result in the ventilation system falling off the wall, causing personal injury and property damage.

If plywood backing is not needed, proceed to the included "Installation diagram".

To install a plywood backing

- Make a cutting line 3" (76 mm) above and 3" (76 mm) below the outline of the retaining plate.
- Find the studs 2 to the left and right of the mounting location by tapping the wall or using a stud finder.
- Mark a vertical cutting line along the center of each stud.

CAUTION: When cutting or drilling into the wall or ceiling, do not damage electrical wiring and other hidden utilities.

- Remove the drywall between the cutting lines and replace it with plywood 3 of a matching thickness (min. ½" (13 mm) thick). Tape the joints and refinish the wall.
- Proceed to the enclosed "Installation diagram" to complete the installation.

- Determine and mark the location of the retaining plate 1 for the canopy as outlined on the "Installation diagram".
Air venting

WARNING: Danger of toxic fumes. Gas cooking appliances release carbon monoxide that can be harmful or fatal if inhaled. To reduce the risk of fire and to properly exhaust air, the exhaust gases extracted by the hood should be vented outside of the building only. Do not vent exhaust air into spaces within walls or ceilings or in attics, crawl spaces or garages. To reduce the risk of fire, only use metal ductwork. Please read and follow the "IMPORTANT SAFETY INSTRUCTIONS" to reduce the risk of personal injury. Follow all local building codes when installing the hood.

Only use smooth pipes or flexible duct hoses made from non-combustible materials for exhaust ductwork.

To achieve the greatest possible air extraction with the lowest noise levels, please note the following:

- The diameter of the exhaust duct should not be less than 6" (150 mm).
- If flat exhaust ducts are used, the cross section should not be smaller than that of the exhaust connector.
- The exhaust duct should be as short and straight as possible.
- If elbows are needed, make sure they have a large radius.
- The exhaust duct itself must not be kinked or compressed.

- Make sure that all connections are secure and airtight.

Remember that any constriction of the airflow will reduce extraction performance and increase operating noise.

- If the exhaust duct is to be routed through an outside wall, we recommend installing a telescopic wall vent or a rooftop vent (available as an optional accessory).

- If the exhaust air is conveyed into an exhaust air chimney, the inlet connector must face the flow direction.

- When installing the exhaust duct horizontally, a minimum slope of 1/8 inch per foot must be maintained to prevent condensate from flowing into the ventilation hood.

- If the exhaust duct is to be routed through cool rooms, ceilings, etc., the temperatures in these different areas may differ greatly. Therefore water condensation must be considered and the exhaust duct will need to be insulated.
In addition to insulating the exhaust duct, we recommend installing a condensate trap to collect and evaporate any condensate which might accumulate. Condensate traps are available for exhaust ducts with a diameter of 5" (125 mm) or 6" (150 mm).

- When installing a condensate trap, make sure that it is positioned vertically and, if possible, directly above the hood outlet duct collar. The arrow on the housing indicates the direction of airflow.

If you would like to reduce the environmental impact of your ventilation system by limiting the CFM output the Reducing Collar can be installed. It reduces the air flow to less than 400 CFM. Check local building codes for max. CFM requirements.

- Push the Reducing Collar on the exhaust port of the blower.
- Push the exhaust hose over it.
- Secure both with a hose clamp.
WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

All electrical work should be performed by a qualified electrician in strict accordance with national regulations (for USA: ANSI-NFPA 70) and local safety regulations. Installation, repairs and other work by unqualified persons could be dangerous.

Ensure that power to the appliance is OFF while installation or repair work is performed.

Verify that the voltage, load and circuit rating information found on the data plate (located behind the baffle filters), match the household electrical supply before installing the hood.

Use only with ventilation hood cord-connection kits that have been investigated and found acceptable for use with this model hood.

If there is any question concerning the electrical connection of this appliance to your power supply, please consult a licensed electrician or call Miele’s Technical Service Department.

WARNING: THIS APPLIANCE MUST BE GROUNDED

Grounding Instructions

WARNING - Improper grounding can result in a risk of electric shock.

This appliance must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing a path of least resistance. This appliance is equipped with a cord having a grounding wire with a grounding plug.

If there is any doubt, have the electrical system of the house checked by a qualified electrician.

Do not use an extension cord. If the power supply cord is too short, have a qualified electrician install an outlet near the appliance.

The plug must be plugged into an outlet that is properly installed and grounded.

WARNING - Grounding instructions (Canada)
The grounding-type attachment plug shall be connected to a grounding-type receptacle installed in accordance with CSA C22.1-12, Canadian Electrical Code, Part I.
Service and warranty

For faults that you cannot resolve on your own, please contact your Miele dealer or Miele Technical Service.

The telephone number for Miele is listed at the back of these instructions.

When contacting Miele, please state the model and serial number of your ventilation hood. These can be found on the data plate.

Location of the data plate
The data plate is visible once you have removed the grease filters.

Warranty
For further information, please refer to your warranty booklet.

MieleCare
This service is available in USA only.

MieleCare, our Extended Service Contract program, gives you the assurance of knowing that your appliance investment is covered by 5 years of worry free ownership. MieleCare is the only Extended Service Contract in the industry that guarantees repairs by a Miele Authorized Service Provider using genuine Miele parts. Only genuine Miele parts installed by factory trained professionals can guarantee the safety, reliability, and longevity of your Miele appliance.

Please note that unless expressly approved in writing by Miele’s Service department, Extended Service Contracts offered by other providers for Miele products will not be recognized by Miele. Our goal is to prevent unauthorized (and untrained) service personnel from working on your Miele products, possibly doing further damage to them, you and/or your home.

To learn more about MieleCare Extended Service Contracts, please contact your appliance dealer or visit us online at: www.mieleusa.com
