

Stop using an indoor TV on your screened-in porch or patio. Now there's a true, outdoor-rated, 4K TV that is bright, safe, and reliable. Introducing Veranda – the world's first weatherproof TV built for full shade and priced to conquer those outdoor projects.

Built for a Budget

Veranda TVs start at just \$1,499 MSRP, in direct competition with a regular 4K TVs on the market. The difference? Veranda models can stand up to harsh weather and deliver a clear picture for years to come.

Safety First

Open the owner's manual of any indoor TV, and you'll find a section that clearly prohibits the TV from outdoor use. When you ask for an indoor TV to be installed outside, you're taking an enormous risk. This type of installation likely voids any warranty, and creates an electrocution risk for you or your family. The TV may also experience an electrical short, possibly compromising the connected devices and causing a fire.

Why you shouldn't install an indoor TV anywhere outside (even on your porch)

Safety

Open the first page of any TV manual, and you'll see a section warning you about the dangers of putting an indoor TV outside. Besides the risk of electrocution, one small short, and your cheap TV can cause some pretty expensive damage.

Damage

If you think that indoor TV is safe under your patio, think again. Humidity, dust, and sunlight can all compromise the inner workings of your device.

Performance

No one wants to watch a picture with obtrusive glare or black spots, but that's what you'll be faced with when your TV isn't equipped for the outdoors.

Price

A SunBrite Veranda series TV starts at just \$1,499 MSRP, in direct competition with regular 4K TVs on the market. The difference? Veranda models can stand up to harsh weather and deliver a clear picture for years to come.

Warranty Issues

It's simple: If you install an indoor TV outside, you're voiding the warranty. So if your picture goes out on the very first day, you're out of luck (and some serious cash).

Compromised Devices

A TV shock or short due to moisture can cause damage to other connected devices, which means more equipment you may have to replace.

Time

Don't bother rolling out and setting up a TV every time you want to be outside. With SunBrite TVs, they're installed once, and last for years.
